**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
- I. Claims 1-10, drawn to a method of optimizing the access to a database of song by providing specific choice of user preferences, mapping the specific choice to a database then playing songs that have similar mapping, and user can get more song or get faster by using a command, classified in class 707, subclass 2.
  - II. Claims 11-56, drawn to a method of pattern matching access to a media database by analyzing a selected song to extract a set of classification mappings for searching a matching database and generating a result list, classified in class 707, subclass 5.
  - III. Claims 57-69, drawn to a method of query formulating by selecting a first and second media station, analyzing the selected media stations to extract sets of classification mapping, cross-analyzing the sets of classification mapping to calculate a mean and standard deviation for searching a matching data base and generating a result list, classified in class 707, subclass 4.
  - IV. Claims 70-86, drawn to a method of sorting media entities by selecting and rating a media entity to extract a set of classification mappings for comparing to classification mapping in historical record and generating an

updated preference profile set of classification mapping based on step comparing, classified in class 707, subclass 7.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions I-IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. For example, Group I is drawn to a method of optimizing the access to a database of song by providing specific choice of user preferences, mapping the specific choice to a database then playing songs that have similar mapping, and user can get more song or get faster by using a command, Group II is drawn to a method of pattern matching access to a media database by analyzing a selected song to extract a set of classification mappings for searching a matching database and generating a result list, Group III is drawn to a method of query formulating by selecting a first and second media station, analyzing the selected media stations to extract sets of classification mapping, cross-analyzing the sets of classification mapping to calculate a mean and standard deviation for searching a matching data base and generating a result list, Group IV is drawn to a method of sorting media entities by selecting and rating a media entity to extract a set of classification mappings for comparing to classification mapping in historical record and generating an updated preference profile set of classification mapping based on step comparing. See MPEP 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicants are advised that the reply to this requirement to be completed must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

5. Applicants is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CR 1.48(b) and by the fee required under 37 CFR 1.17(i).
